

VITROGRES – The Environment

We know our consumers are concerned about the world they live in, selecting the finest products yet at the same time demanding respect for the eco-system.

We have continued to collaborate with Universities and Public Organisations on research projects aimed at sustainable development and innovation using clean technologies only, reusing raw materials and reducing atmospheric pollution to a minimum, thanks to the installation of clean products (only recyclable materials), ecologic, natural systems of energy (solar panels) and recyclable packages.
